Titanium Screw Set 'HMX'

Ti-Screws (85 pcs)

11853

Replace the steel kit screws by these super high-grade titanium screws. They are 40% lighter than steel screws but have equal strength. If you are looking for lower weight, these titanium screws are the way to go!

Balancing Weight - 25 g

Chassis Mounted

79383

Getting rid of all the higher placed weight will allow your car to turn faster. In case you will need to add weight these purpose designed balancing weights put the weight exactly there where you want

HMX

Rear Topdeck

2.0 mm Graphite

79461

This minimized rear deck does not have the body post mounting locations of the one that comes in the HMX kit. When converting to the body post locations on the graphite shock towers you may as well do it in style. This narrow rear deck will do the trick and is guaranteed to give the edge!

Camber Link Mounts

Front / Rear (1 pair)

79770

The standard HMX kit offers various roll-center options by fine horizontal camber link adjustment. The hard anodized AL7075 camber link mounts allow the use of shorter camber links. They can be mounted flush to the bulkheads or with spacers in between for even shorter camber links. These cool parts come in pairs and can be used on either the front or rear camber links of your HMX racer.

Anti Roll Bars (1 Set)

Front / Rear (1 set)
Pivot Mount-AL7075

79441
79440

These anti-roll bars feature a newly innovated design to do away with the excessive play commonly found on other anti-roll bar systems. They run on ball bearings and effectively start doing their job where others are still at rest. They pick up on the slightest movement for total control and faster cornering in all conditions.

1 set of anti-roll bars provide you with all the hardware to equip your HMX with a front or rear unit. Each set comes with 3 antiroll bar wires (1.0 mm - 1.3 mm - 1.6 mm) allowing you to choose the perfect thickness to your specific situation without having to buy any additional parts!
